

## Chemprotec™

Chemprotec™ is an unlined natural rubber glove that performs well to protect against a variety of chemicals and cleaning agents including acids, alkalis and alcohols. It also attains good EN388 scores for abrasion and tear resistance enhancing its mechanical protection and durability. Unlined for easy donning, it allows for an underglove to be worn for added protection or comfort. Its anatomical shape and flexibility minimise hand fatigue, and it has a smooth surface which prevents stickiness and surface tack. It is available in variable lengths and weight allowing the user to choose the appropriate level of protection required.

### Typically used for:

- Chemical Handling • Plant Maintenance
- Janitorial & Hygiene • Laboratory Work
- Waste Management • Utility Work

### Case Quantity:

#### Mediumweight

**44cm**  
1 pair per polybag  
20 pairs per case
